Creating a Website: The Missing Manual, 4th Edition

Depending on how the plugins and your WordPress theme uses JavaScript and CSS, it could be quite challenging to completely fix all render-blocking JavaScript and CSS issues. While the above tools can help, your plugins may need certain scripts at a different priority level to work properly.

How to Fix Render-Blocking JavaScript and CSS in WordPress

And as with CSS you can put it either in HTML or CSS file, but putting it in HTML doesn't really make any sense, because if CSS file loads quicker than your HTML (which is a bit funny but I guess that can happen), the @font-face might not load, so answering your question - put @font-face at the BEGINNING of your CSS file.

Using @font-face | CSS-Tricks

1) Mobile phones including iPhone series using a CSS file (includes portrait and landscape layouts with @media), 2) Tablets & iPads using a CSS file (includes portraits and landscape layouts with @media), 3) and desktop version CSS (which for large, medium and small break points use @media separated.)

The output will tell us that PostCSS took our tailwind.source.css file and generated the CSS file public/build folder/tailwind.css: Generating the Tailwind CSS file. If you get warnings about some Tailwind CSS features being removed in the future, take a look at the Keeping up with Tailwind CSS development section at the end of this guide.

The complete guide to customizing a Tailwind CSS theme

Over the past few years, CSS Flexbox has become widely used and browser support is looking really good (unless you are one of the poor souls that have to support IE9 and below). Flexbox made a lot of complex layout tasks easier, like equi-distant spacing between elements, top-to-bottom layouts or the holy grail of CSS wizardry: vertical centering.
