Docker Up Running 2nd Edition

The early release of Terraform: Up & Running, 2nd edition, is now available! The 2nd edition is nearly double the length of the 1st edition (~160 more pages), including two completely new chapters (Production-grade Terraform Code and How to Test Terraform Code), and major changes to all the original chapters and code examples to take into ...

Terraform: Up and Running

Environment variables supported by Docker Compose¶. Do not confuse the variable names here with the build arguments set when image is built. The AIRFLOW_UID and AIRFLOW_GID build args default to 50000 when the image is built, so they are “baked” into the image. On the other hand, the environment variables below can be set when the container is running, using - for example - result of id-u ...

Running Airflow in Docker — Airflow Documentation

Docker Engine is now running as a Windows service, listening on the default Docker named pipe. For development VMs running (for example) in a Hyper-V VM on Windows 10, it might be advantageous to make the Docker Engine running in the Windows Server 2016 VM available to the Windows 10 host:

Build and Run Your First Docker Windows Server Container ...

This was an use for me as well. I ended up installing Docker in an Ubuntu 1804 VM. I nor anyone on my team has run into issues running docker like this. We use a container to build our solution and run it. Ironically the container is Centos 7. So I have three layers of OS's between the code and the HW and haven't run into issues yet.

Docker for Windows w/ VMWare installed - Docker Desktop ...

The same issue is discussed at kubernetes GitHub issues page and the user "alahijani" made a bash script that exports all yaml and writes them to single files and folders.. Since this question ranks well on Google and since I found that solution very good, I represent it here. Bash script exporting yaml to sub-folders:

docker - Get YAML for deployed Kubernetes services ...
