Tropical Eye Diseases Atlas (last update: 6th June 2019 ...

Tropical diseases are diseases that are prevalent in or unique to tropical and subtropical regions. The diseases are less prevalent in temperate climates, due in part to the occurrence of a cold season, which controls the insect population by forcing hibernation. However, many were present in northern Europe and northern America in the 17th and 18th centuries before modern understanding of ...

Tropical disease - Wikipedia

Types of diseases that can attack the eyes of the fish and the symptoms There are mainly three types of diseases that can attack the fish eye. The first one is gas bubble disease, the second is eye flukes and the third is the cataract. Symptoms can vary but are mainly as follows: Some of the disease that targets the fish eye makes the eye larger.

Common Eye Disorders In Fish: Types, Symptoms, Treatment ...

This chapter describes four ways in which eye diseases in hot, tropical or developing countries differ from those in other countries—(1) eye disease and blindness is very common; (2) most of the blindness is either preventable or treatable; (3) pattern of eye disease can vary considerably from area to another; and (4) medical resources are usually inadequate.

What is pop-eye in fish. Pop-eye or exophthalmia is a common condition in which one (unilateral) or both (bilateral) eyes of an aquarium fish become abnormally swollen, looking like they are about to pop out of the socket [1, 2]. Pop-eye is not a disease itself, but an indication of other underlying disorders [1]. However, species like celestial eye goldfish and black moor goldfish have large ...
