There is worldwide concern over false news and the possibility that it can influence political, economic, and social well-being. To understand how false news spreads, Vosoughi et al. used a data set of rumor cascades on Twitter from 2006 to 2017. About 126,000 rumors were spread by ~3 million people. False news reached more people than the truth; the top 1% of false news cascades diffused to ...

Try to run every day since the more you run, the faster you'll get. Aim to do 4 to 5 hill sprints every time you go running. Hill sprints are one of the best ways to improve your speed. If you want to run faster over long distances, try to push yourself to run a little farther every time you go for a long-distance run.

This happens because sound waves can travel, or vibrate, a short distance faster than a long distance. You see, the pipe is not vibrating, rather it's a column of air inside the pipe that's vibrating. When the column of air vibrates up and down the pipe at a faster rate, we say it has a higher frequency.

A solution to this problem can be credited to 16th-century fireworks maker Johann Schmidlap. He attached small rockets to the top of big ones. When the large rocket was exhausted, the rocket casing was dropped behind and the remaining rocket fired. Much higher altitudes were achieved. These rockets used by Schmidlap were called step rockets.
