Steering knuckles hold the front wheels, see the diagram. When a driver turns the steering wheel, the steering rack slides and the tie rods turn the steering knuckles in the desired direction. A tie rod is made of two components: the inner and outer tie rod ends.

When does the tie rod end need to be replaced?

Electrical steering column adjustment is controlled by the Front Electronic Module (FEM) in the following situations: In the case of manual steering column adjustment, the driver's choice is read in by the steering column switch cluster (SZL) and transmitted to the Front Electronic Module (FEM) via the local interconnect network bus.

BMW Front Electronic Module (FEM) » Bimmerscan

This type of cylinder is what is known as a balanced cylinder, meaning that port and starboard deflections take the same amount of hydraulic fluid. This, in turn, makes it ideal for autopilots, since they act symmetrically port and starboard. Note that some older BayStar steering kits (HK4200 and HK4230) use an unbalanced cylinder, and cannot be used with autopilots.
