The concept of particles is particularly useful when modelling nature, as the full treatment of many phenomena can be complex and also involve difficult computation. It can be used to make simplifying assumptions concerning the processes involved. Francis Sears and Mark Zemansky, in University Physics, give the example of calculating the landing location and speed of a baseball thrown in the air.

Classical mechanics is a physical theory describing the motion of macroscopic objects, from projectiles to parts of machinery, and astronomical objects, such as spacecraft, planets, stars, and galaxies. For objects governed by classical mechanics, if the present state is known, it is possible to predict how it will move in the future (determinism), and how it has moved in the past (reversibility).

Stabiel deeltje. De sterke kernkracht houdt het alfadeeltje zo sterk bijeen, dat deze kern heel stabiel is. De bindingsenergie per nucleon is in een alfadeeltje zeer hoog. De bindingsenergie bereikt bij isotopen vanaf het losse proton een eerste maximum bij het alfadeeltje. Een gevolg van deze sterke binding is dat er geen kernen met vijf of acht kerndeeltjes bestaan, omdat die onmiddellijk ...

Il fotone è il quanto di energia della radiazione elettromagnetica. Storicamente chiamato anche quanto di luce, fu introdotto all'inizio del XX secolo, quando si capì che in un'onda elettromagnetica l'energia è distribuita in pacchetti discreti e indivisibili. Il termine (dal greco φῶς gen. φωτός "phòs, photòs" che significa luce) fu coniato a Parigi nel luglio 1926 dal fisico ...
