The survival function is a function that gives the probability that a patient, device, or other object of interest will survive beyond any specified time.. The survival function is also known as the survivor function or reliability function.. The term reliability function is common in engineering while the term survival function is used in a broader range of applications, including human ...

sic statistical tutorial discusses a series of fundamental concepts about descriptive statistics and their reporting. The mean, median, and mode are 3 measures of the center or central tendency of a set of data. In addition to a measure of its central tendency (mean, median, or mode), another important characteristic of a research data set is its variability or dispersion (ie, spread). In ...

Estimators. The efficiency of an unbiased estimator, T , of a parameter θ is defined as $e(T) = \frac{V(T)}{V(T_{opt})}$ where $V(T)$ is the Fisher information of the sample. Thus $e(T)$ is the minimum possible variance for an unbiased estimator divided by its actual variance. The Cramér–Rao bound can be used to prove that $e(T) \leq 1$.. Efficient estimators. An efficient estimator is an estimator that estimates the ...

The branch of science that is responsible for studying the behavior of qualitative and quantitative variables is statistics. In this way, it analyzes the numerically measurable variables and the abstractions that can not be measured and whose estimation depends on the individual who perceives them (Statistics, 2013).
