Just bought a used Mercury 25hp 2-stroke with manual tilt and remote. How do I raise a Mercury 25hp 2-stroke outboard out of water when not running? It is locked; the lever on the side will not move so I assume it is interlocked to shift mechanism. I have tried shifting the remote control box into reverse, neutral and forward. contender

Re: Broke the trim/tilt release screw mercury manual release are not designed to work on torque. they are a solid plug with a series of orings. As you screw the release in and out the orings slide past openings to either block or allow pressure. That is why the threads are coarse. That is why the valve stem is harder to turn under pressure.
