Cancer vaccines have shown evidence of efficacy in controlled trials, and the type of immune response to a cancer vaccine that will be needed for cancer prevention is becoming increasingly known. It is time to focus on cancer vaccines as cancer chemoprevention agents with a high likelihood of success.

Conclusion.

Chemoprevention offers a promising approach to primary cancer prevention for a variety of organ systems. Candidate agents are rigorously evaluated for safety and efficacy through the chemoprevention clinical trials process.

raloxifene are chemopreventive drugs that can reduce women's relative risk of primary breast cancer by 50%; however, most women eligible for these drugs have chosen not to take them. The reasons for low uptake may be related to women's knowledge or attitudes towards the drugs. We aimed to examine the impact of an online breast cancer

Cancer Prevention

Cancer prevention is action taken to lower the chance of getting cancer. By preventing cancer, the number of new cases of cancer in a group or population is lowered. Hopefully, this will lower the number of deaths caused by cancer. Cancer is not a single disease but a group of related diseases.
