diameter in the 7.5 cm diameter base and 17 mm diameter in the 24 mm diameter top.

Silviculture - Wikipedia

The seed usually runs through Java's Random class, which only uses 48 bits of the seed. There are some complicating factors, but I'm finishing off a tool to do this. At the moment it narrows the options for the lower 48 bits to a few tens of thousands - will need to chain with some other technique to reduce further.

Find a Minecraft SMP server seed based on known locations ...

Also known as "direct sowing," this technique is sometimes used instead of planting indoors. It's a good choice for seeds that don't require a lot of coddling, or seedlings that suffer from transplant shock. In the case of nasturtiums, it's convenient because you can plant them right where you want them to grow and never have to transplant.

How to Grow Nasturtiums from Seed | Gardener's Supply

Hydroponics Systems master page to choose between Aeroponics, Deep Water Culture (DWC), Drip, Ebb and Flow, NFT, Sea of Green, SCROG or Wick. Hydroponics simply means that the plants can grow without soil. They will usually grow in an inert growing medium and all of their micro and macro nutrient requirements will come straight from the water flow.. The advice from companies like Dealzer and ...

It's typically not done alone, however. Proper scrogging works best if you also use other methods, such as topping. Topping basically involves cutting off the tops of your marijuana plants, so they grow outwards rather than upwards. This helps them grow more branches and become bushier, while scrogging helps every part of those branches and leaves to get exposed to sunlight, making for an ...

So, even a very small number of samples can tell us a lot about the cost of instructions that it sees. (And it will see them with a frequency, on average, proportional to their cost. If n samples are taken, and f is the cost, then I will appear on $nf \pm \sqrt{nf(1-f)}$ samples. Example, $n=10$, $f=0.3$, that is 3 ± 1.4 samples.)
